LEAK PLUG REFRIGERATION

Radiator leak plug

➤ DESCRIPTION

Leak plug refrigeration is a sealer, it seals the leaks in the refrigeration circuit, and it ensures the proper functioning. It works as an excellent permanent sealer to cracks and leaks. It avoids the exudation of joints and the loss of refrigerating water.

It is suitable for any type of coolant made of glycol and glycerin.

➤ PROPERTIES

- It avoids leaks in the refrigeration circuit.
- Permanent sealer to cracks and leaks.
- It ensures the functioning of heating valves and water pump.
- It does not damage rubbers nor plastics.
- It keeps the working pressure.
- It avoids the exudation of joints and the loss of coolant.

PARAMETER	STANDARD	RESULTS
Aspect	Visual	Green liquid
Density (g/ml)	ASTM D-1298	1.00
Boiling point, °C	ASTM D-1078	198
Combustion point, °C	ASTM D-56	>55

200 ml. 12 units
Ref: 00230040011

DOSE

1 dose (200 mL) treats up to 12L of coolant.

APPLICATION

1. To add while the engine is hot.
2. To open the ventilation valves.
3. To keep the engine on, at least, 10 minutes, until the thermostat is open, and the heating emits perceptible heat.
4. To turn the engine off.
5. To make sure that the refrigerant level is kept.
6. To do a driving test.
