

· ADDITIVE FOR LIGHT DUTY VEHICLES

## TYRE REPAIR

### Puncture repair

#### DESCRIPTION

Tyre Repair is a state-of-the-art preventive puncture repair product. It instantly repairs any puncture smaller than 15mm in diameter.

Thanks to its formulation, it creates a layer on the entire inner layer of the tyre, achieving a perfect and uniform distribution instantly. It is non-toxic, non-corrosive, does not contain adhesives and therefore does not affect the rim or tyre.

In most cases, it is not necessary to repair the tyre (the case must be evaluated). No mileage or speed limit.

#### PROPERTIES

- Repairs punctures of objects up to 7 mm in diameter.
- No expiry date as long as the package is not opened.
- Does not affect the ozone layer.
- Non-corrosive, non-toxic and non-flammable.
- Can be cleaned with water.
- Suitable for vehicles with pressure sensors.
- Recommended for tyres up to 245/55/R18.

#### DOSE

One dose is sufficient for tyres up to 245/55/R18.

#### APPLICATION

1. Remove the valve core (valve stem) and leave the tyre completely deflated.
2. Connect the canister to the valve and discharge the contents of the dose into the tyre.
3. Replace the valve core (Howitzer) and inflate the tyre.
4. Rotate the tyre to mix the product and circulate normally.

200 ml. 12 uds.
